THE LEISEGANG COLPOSCOPE MODEL II

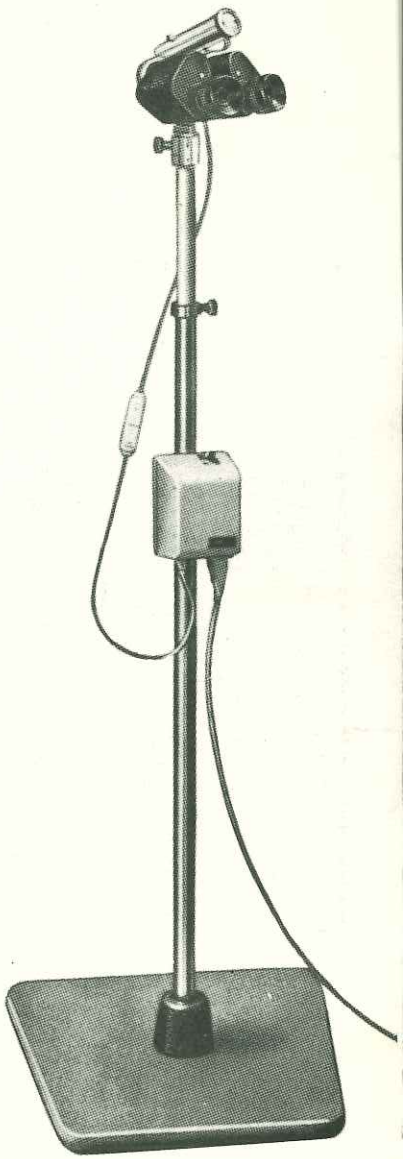
An instrument similar to the Standard-Colposcope Model I but without the fine focussing adjustment.
The adjustment is accomplished by the easy mobility of the light Tilting Stand or Swing-o-matic Mount.

The very intensive light is narrow angled and rheostat controlled.

THE LEISEGANG MINI-COLPOSCOPE MODEL IV

This inexpensive instrument has been created for the general practitioner, and those physicians who need an easily transportable small model for use in several clinics, hospitals, and offices. It is also an excellent instrument for dermatologists and eye, ear, nose and throat specialists.

It is available with a simple handle for hand use, or a light bending stand, or any of our standard mounts.



MINI-COLPOSCOPE
with light bending support
